iMap

DIGITAL SOLUTIONS LIMITED

Build it.
Secure it.
Prove it works.

Practical technology. Local understanding.

A Zambia-based consultancy and technology delivery company helping organisations turn difficult operational questions into usable software, secure systems and evidence for better decisions.

TECHNOLOGY • CONSULTANCY • EVIDENCE

COMPANY PROFILE | ZAMBIA

Digital systems, secure operations and decision-ready evidence.

AT A GLANCE

Technology grounded in real work

iMap Digital Solutions Limited is a Zambia-based consultancy and technology delivery company. We help organisations turn difficult operational questions into usable software, secure systems and evidence that supports better decisions.

Our work brings together senior advisory, software development, AI and automation, IT infrastructure, cybersecurity, research, monitoring and evaluation, business intelligence, telecoms and connectivity. We design around the people who use a system, the processes that sustain it and the conditions in which it must operate.

BUILD IT

Design and build websites, applications, digital products, integrations and AI-enabled workflows around defined requirements.

SECURE IT

Strengthen access, infrastructure, privacy, resilience and security controls across new and existing systems.

PROVE IT WORKS

Connect research methods, field operations, monitoring and evaluation, analytics and reporting so leaders can act on evidence.

OUR POSITION

Zambian organisations should not have to choose between powerful technology that ignores local conditions and local systems that cannot keep pace with changing needs. iMap exists to close that gap.

VISION

Technology that enables organisations and communities to make better decisions and participate in the digital economy.

MISSION

To develop reliable, research-informed digital tools for the work people actually need to do.

HOW WE THINK

We clarify the decision before selecting a tool, consider security before a weakness becomes an incident, and measure whether a solution is useful after delivery.

OUR SERVICES

Advisory, AI and secure operations

We clarify the problem, the people involved and the environment a solution must work in—then recommend and deliver an approach with a clear scope.

Consultancy & advisory

Digital strategy, requirements definition, architecture, procurement specifications, operating-model advice, governance and implementation roadmaps.

AI integration & automation

Document intelligence, assistants, chatbots, process automation and integrations designed around real workflows, with appropriate human oversight and agreed data responsibilities.

IT solutions

Servers, hosting, networks, devices, data migration, business systems, desktop support, equipment configuration, documentation and ongoing operational support, including ERP implementation support.

Cybersecurity

Security advisory, vulnerability assessment, hardening, access and governance controls, authorised penetration testing, incident-response planning, threat monitoring, security awareness and recovery planning. Testing is conducted within an agreed written scope and authorisation.

OUR APPROACH

We plan for the operating environment, document assumptions and responsibilities, and make the handover part of delivery—not an afterthought.

OUR SERVICES

Evidence, software and connectivity

Research & business intelligence

Baseline, midline, endline, formative, summative, process and impact evaluations; digital data collection; data management and quality assurance; indicator design; dashboards; geographic analysis; and Monitoring, Evaluation, Research and Learning support.

Telecoms & connectivity

Networks, secure remote access, Wi-Fi, VoIP, branch connectivity and communications approaches selected around coverage, cost, reliability and support capacity.

Software development

Web and mobile applications, digital products, APIs, integrations and workflow systems. We work with existing systems where sensible and document decisions affecting ownership, security, maintenance and future change.

IT infrastructure & support

Practical deployment and support for the systems organisations rely on every day, including configuration, migration, troubleshooting, equipment supply and handover documentation.

WHAT TIES OUR WORK TOGETHER?

Practical design, clear requirements, security and privacy by default, and a handover that helps clients use and maintain what has been delivered.

PRODUCTS & SECTORS

Digital products shaped by local needs

Lumikiza

A digital advisory-matching concept for Zambian SMEs. It uses weighted multi-criteria decision analysis to connect business needs with relevant advisory support. Product direction is informed by research and evaluation; performance claims remain tied to available evidence for each release.

NyoniLine

An agriculture technology product in active development for poultry farmers. It is designed around flock records, feed planning, market intelligence and offline-first operational workflows, with future product work exploring AI-assisted diagnostics and agribusiness decision support.

SECTORS WE SERVE

Government, NGOs & civil society

Institutional systems, advisory, evidence, infrastructure, security and delivery support.

Health

Digital health systems, programme data, health information management and secure low-connectivity workflows.

Agriculture & agri-processing

Farm and livestock records, inventory, value-chain intelligence, connectivity and field-ready tools.

Education

Learning and institutional systems, computers, connectivity, infrastructure, data and workflows.

Green & blue economy

Technology, geographic analysis, research and evidence for climate, environment and sustainable enterprise.

FinTech, e-commerce & SMEs

Secure platforms, operational systems, automation, analytics, connectivity and advisory.

Universities & research partners

Applied research, data collection, analysis, dashboards, practical projects, training and short courses.

DELIVERY & EXPERIENCE

Clear steps. Practical handover.

We structure engagements so that requirements, responsibilities, review points and support arrangements are agreed before work begins.

01 Scope

Agree the problem, users, operating environment and requirements.

02 Quote

Set out scope, price, milestones, assumptions and quote validity.

03 Agree

Sign a written agreement and establish data-processing or confidentiality terms where required.

04 Start

Begin once the agreement is signed and any agreed deposit is received.

05 Deliver

Work in milestones with written review and sign-off points.

06 Launch & support

Hand over the solution, documentation and agreed support arrangements.

SELECTED DELIVERY EXPERIENCE

Selected experience includes server deployment, network and IT support, CCTV installation and maintenance, desktop support, equipment supply and configuration, and related technology services for organisations including Zambia Open Community School, Aceh Executive Lodge, Acacia Engineering Ltd, Charles Drew University’s Rise Up House and TMB Associates.

Additional partner-led experience includes work associated with Zambia Sugar, the Office of the Auditor General, Zambia National Building Society, the Zambia Medicines and Medical Supplies Agency and BBC Media Action. Specific scope, delivery ownership and references should be confirmed for each opportunity before publication or proposal use.

TRUST & ACCOUNTABILITY

Responsible technology, by design

We aim to leave clients with systems they can understand, use and maintain—and with clear expectations about what a solution does and does not do.

Evidence before claims

We state what the evidence shows, what it does not show and what should be tested next.

Practical over impressive

We build what the work needs and recommend a simpler option when it is better.

Local understanding

We design for Zambian regulation, infrastructure, connectivity, skills and working conditions.

Security & privacy by default

We protect the systems and information entrusted to us.

Clear scope

We agree requirements, deliverables, responsibilities, milestones and support terms before work begins.

Useful handover

We leave documentation, capability and support pathways clients can use after delivery.

GOVERNANCE, COMPLIANCE & DATA RESPONSIBILITY

iMap is incorporated in Zambia; company registration documents are available on request. Where personal data is handled on a client's behalf, data-processing responsibilities are agreed in writing. Security scope, access permissions, testing authorisation and incident responsibilities are defined before relevant work begins. Hosting, infrastructure and support arrangements are agreed according to client requirements, risk profile and applicable obligations.

We do not present an illustrative product screen, concept or partner experience as a guaranteed outcome or a current production deployment.

PARTNERS & COLLABORATION

We work with specialist partners and collaborators when an engagement benefits from additional capability in data analytics, data management, digital health, monitoring and evaluation, infrastructure, governance, legal services and SME growth. Partner roles and public attribution are confirmed for each engagement. Whitewood Management Services is a strategic management partner supporting strategy implementation, governance, risk, compliance and SME growth.

LET'S SOLVE THE RIGHT PROBLEM

Tell us what you need to achieve.

Tell us the problem you want solved. We will respond with a scoped plan, a clear price and a realistic timeline.
